

ABSTRACT OF THE DISCLOSURE

5 Apparatus and method for rearming combat aircraft in-flight. Said invention
comprises an apparatus for the aerial transfer of munitions from a rearming aircraft to the
weapons pylon of the recipient combat aircraft. Invention further comprises a method for
the selection of munitions from a database of munitions and aircraft types in response to
an Air Tasking Order. Invention further comprises an apparatus to adapt a variety of
10 combat aircraft to aerial rearmament. Invention further comprises means to release
precision guided munitions directly from a rearming aircraft so that orbiting combat
aircraft can guide these munitions to the target by remote control.
